Contactor® & Recharger® Chamber

The Contactor® Chamber series consists of lower profile, lower capacity chambers and are typically used for installations with depth restrictions or when a larger infiltrative area is required. Conventional manifolds must be used with this series.

The Recharger® series consists of higher profile, higher capacity chambers. When using this series, less chambers are required resulting in less labor and a smaller installation area.

Heavy Duty (HD) versions must be used for traffic applications.

[Our most popular and cost-effective models used for stormwater are the 100, 150, 280, 330XL and V8.](#)

Recharger 330 is available for non-domestic use only. All domestic designs are to use the Recharger 330XL.
